

Basic Derivative Rules

2.3 – Product Rule

Product Rule

Newton's Notation

$$(f \cdot g)' = f' \cdot g + f \cdot g'$$

Ex A: Use the Product Rule and Newton's Notation to find the derivative of each product.

#1) $x^4 \cdot x^6$

$$\begin{aligned} (x^4 \cdot x^6)' &= (x^4)'x^6 + x^4 \cdot (x^6)' \\ &= 4x^3 \cdot x^6 + x^4 \cdot 6x^5 \\ &= 4x^9 + 6x^9 \\ (x^4 \cdot x^6)' &= 10x^9 \end{aligned}$$

#2) $y = (x^3 - x^2 + 7)(x^4 + 3)$

$$\begin{aligned} y' &= (x^3 - x^2 + 7)' \cdot (x^4 + 3) + (x^3 - x^2 + 7) \cdot (x^4 + 3)' \\ &= (3x^2 - 2x)(x^4 + 3) + (x^3 - x^2 + 7)(4x^3) \\ &= 3x^6 + 9x^2 - 2x^5 - 6x + 4x^6 - 4x^5 + 28x^3 \\ y' &= 7x^6 - 6x^5 + 28x^3 + 9x^2 - 6x \end{aligned}$$

Product Rule

Leibniz's Notation

$$\frac{d}{dx}(f \cdot g) = \left(\frac{d}{dx}f\right) \cdot g + f \cdot \left(\frac{d}{dx}g\right)$$

Ex B: Use the Product Rule and Leibniz's Notation to find the derivative of each product.

#1) $x^4(4x^7 - 3x^2 + 12)$

$$\begin{aligned} \frac{d}{dx} [x^4(4x^7 - 3x^2 + 12)] \\ &= \frac{d}{dx} x^4 \cdot (4x^7 - 3x^2 + 12) + x^4 \cdot \frac{d}{dx} (4x^7 - 3x^2 + 12) \\ &= 4x^3(4x^7 - 3x^2 + 12) + x^4(28x^6 - 6x) \\ &= 16x^{10} - 12x^5 + 48x^3 + 28x^{10} - 6x^5 \\ &= 44x^{10} - 18x^5 + 48x^3 \end{aligned}$$

#2) $y = \frac{15x+1}{x^3}$

$$\begin{aligned} \frac{dy}{dx} &= \frac{d}{dx}(15x+1) \cdot x^{-3} + (15x+1) \frac{d}{dx} x^{-3} \\ &= 15 \cdot x^{-3} + (15x+1)(-3x^{-4}) \\ &= \frac{15}{x^3} + \frac{(15x+1)(-3)}{x^4} \\ &= \frac{15 \cdot x}{x^3 \cdot x} + \frac{-45x - 3}{x^4} \\ &= \frac{15x - 45x - 3}{x^4} \\ \frac{dy}{dx} &= \frac{-30x - 3}{x^4} \end{aligned}$$

Basic Derivative Rules

2.3 – Product Rule

Ex C: Answer the following word problems.

PS4 sales

#1) After selling PS4s for t weeks, the total sales are $S(t) = t^3(16 - t^2)$ thousand PS4s for the first 3 weeks of sales. Find the rate of change after week 2.

$$S(t) = \text{thousand PS4s} \quad t = \text{weeks} \quad S'(t) = \text{thousand PS4s/week}$$

$$\begin{aligned} S'(t) &= (t^3)'(16 - t^2) + t^3(16 - t^2)' \\ &= 3t^2(16 - t^2) + t^3(-2t) \\ &= 48t^2 - 3t^4 - 2t^4 \end{aligned}$$

$$S'(t) = -5t^4 + 48t^2$$

$$S'(2) = -5(2)^4 + 48(2)^2$$

$$= -5(16) + 48(4)$$

$$= -80 + 192$$

$$S'(2) = 112 \text{ thousand PS4s/week}$$

After selling PS4s for 2 weeks, the total number of sales is increasing by 112,000 PS4s per week.

Weeds

#2) After pulling weeds for t days, the total number of weeds in a flower garden can be represented by $W(t) = (t^2 + 1)(t^3 - 1)$ weeds. Find the rate of change after 8 days.

$$W(t) = \text{weeds} \quad t = \text{days} \quad W'(t) = \text{weeds/day}$$

$$\begin{aligned} W'(t) &= (t^2 + 1)'(t^3 - 1) + (t^2 + 1)(t^3 - 1)' \\ &= 2t(t^3 - 1) + (t^2 + 1)(3t^2) \\ &= 2t^4 - 2t + 3t^4 + 3t^2 \end{aligned}$$

$$W'(t) = 5t^4 + 3t^2 - 2t$$

$$W'(8) = 5(8)^4 + 3(8)^2 - 2(8)$$

$$= 5(4096) + 3(64) - 16$$

$$= 20,480 + 192 - 16$$

$$W'(8) = 20,656$$

After pulling weeds for 8 weeks, the number of weeds in the garden are STILL increasing by 20,656 weeds per week.
